Objective

Seeking full-time employment as a software engineer after graduation in December 2014. Interested in Full-Stack Web or Mobile Development position in New York City.

Skills

Git, Ruby, Rails, Sinatra, Java/Android, Obj-C/iOS, Html5/CSS3, JS/JQuery, RESTful HTTP, JSON CRUD, Unix Terminal, SQL, Apache-Cordova, NodeJS, MongoDB

Experience

Major League Hacking — New York, NY
Coach and Campus Representative — *Fall '14 – present*

Campus representative and community leader to inspire students to develop their own applications and participate in hackathons.Participated in weekly conferences with the larger MLH community.

Unhackathon — Stony Brook, NY
Lead Web Developer, Organizer and Workshop Instructor — *Summer '14 – Fall '14*

Built an interactive sign-up form and complimentary back-end to host the 400 student sign-ups. Volunteered and mentored participants in Web and Mobile Development

Stony Brook Children's Hospital — Stony Brook, NY
Lead Mobile Developer — *Spring '14 – Summer '14*

A interactive mobile application to step patients through the 24 hour long time sensitive procedure to prepare themselves for a colonoscopy.Developed using Apache-Cordova to simultaneously port to iOS and Android.

Sport195 — New York, NY
Technical Intern — *June '13 – Aug '13*

Developed new profile image cropping tool using RMagick and Paperclip for Ruby on Rails 3.0.

Personal Projects

Automated Deployment Tool
Tuesday.rb — *built @ HackNY, Oct 2014*

A Commandline tool designed to help developers migrate from Development to Production in a seemless transation. Built with Digital Ocean in mind, Tuesday anaylizes your stack and installes/configures the necessary technologies to get your site up and running. It even handles subdomains .[Built using Ruby/Rubygems/Bash/Nginx/Unicorn.]

Github Social Network App
Gitten — *built @ HackRU, Oct 2014*

Gitten is a social networking site for hackers and their repos. Styled like Twitter, but with a feed of GitHub commits, Gitten allows you to see the progress of your friends (and rivals!) projects.[Built using Ruby/Sinatra/Bootstrap/MongoDB/Postgres]

Mobile Cloud Based Application
Huntr — *Fall 2014*

Mobile match making application for iOS and Android, built with Ruby/Sinatra. Allows employers and potential employees to find each other and possible exchange contact. It brings the easy and usability of Tinder to finding Software Engineers. Built for a course in mobile applications (CSE 391).

Education

Stony Brook University — Stony Brook, NY
Bachelor of Science in Computer Science — *impending 2014*

Clubs: SBU Computing Society, SBU Mobile App Developers, Linux Users' Group SBU
Leadership: Mobile App Developers Founder and President [Spring 2012-Fall 2014], TechTalk on Apache Cordova[Oct 2014], Geek Games Volunteer [Fall 2012-Fall 2014]
